A SUCCESSFUL PARTNERSHIP: AEROMAG AND FORTBRAND'S GREEN INITIATIVE WITH THE BUCHER SWEEPER 5006 CITYCAT GRVS

With a collaboration spanning over a decade, Bucher Sweepers and Fortbrand Services LLC (FB) have forged a successful partnership that extends beyond business transactions.

The roots of this triumph can be traced back to 2007 when Aeromag joined forces with Bucher Sweepers and Fortbrand Services LLC in their deicing business. An integral aspect of this partnership lies in the deployment of Bucher Sweeper units.

With the delivery of nearly two dozen units, these sweepers have proven to be essential components in Aeromag's operational framework.

The recent delivery of four Bucher CityCat 5006 GRV units and the order for three Bucher V65T GRV units are testaments to the ongoing success of this collaboration.

This latest agreement holds particular significance as it facilitates LaGuardia's Terminal B Aircraft deicing and fluid recovery program.

The Bucher GRVs are strategically positioned to efficiently remove aircraft deicing contaminants from gate positions and the central deicing location.

These advanced GRV units are aligned with Aeromag's mission to pioneer environmental innovations and develop together best practices for the aviation industry. By complying with FAA, USDA, and EPA aircraft deicing fluid recovery requirements, Aeromag commits to eliminating the environmental impact of its operations.

The Bucher GRV units play a pivotal role in ensuring compliance while demonstrating the innovative strides the partnership has taken to contribute to a cleaner and safer environment.
